# iOS Developer test task

The application we ask you to write will have to display articles that are being loaded from the JSON file and give the user the ability to select up to 6 articles.

## Instructions

- Write a service that loads and parses the [json file](#).
- Build a user interface that shows a list of articles loaded using the service you wrote.
- Add selection/deselection functionality.

## General Requirements

- Swift required (no ObjC).
- UIKit
- The UI might look similar to the following: there is a vertical list of sections; section is the horizontal list of articles; the selected article has a border:
